# Nomenclature

## NOM Goals & Objectives

### Nomenclature (NOM)

*“In life and science, names are essential communication tools within a community and among communities”* Alberto Mantovani

Nat. Immunology March 2016

The mission of the different IUIS Nomenclature subcommittees is to establish a universal and consistent nomenclature for both molecules and cells of the immune system.

The IUIS subcommittees have continued to establish the nomenclature of different molecules of the immune system and updating their databases and webpages. Especially active have been the subcommittees of **Allergen Nomenclature, Ig TR and MH Nomenclature, and CD Molecule Nomenclature**.

New subcommittees have been also created for the nomenclature of cells and cellular subsets.

# NOM Opportunities and Challenges

**Support the work and visibility of the existing IUIS Nomenclature subcommittees**

**Create new subcommittees especially especially related to cells and cell subsets of the immune system nomenclature**

-Tissue macrophages; dendritic cells; and T cell subsets

**Create of a new subcommittee of cytokine/chemokine nomenclature in collaboration with the International Cytokine&Interferon Society**

**Boost the activity of the subcommittees that are not working well**

**Establishing an official collaboration between the IUIS Nomenclature Committee and WHO seems fundamental for the international recognition of the work and authority of our nomenclature committees**
