IMGT®, the International ImMunoGeneTics Information System <https://www.igmt.org>, is the global reference in immunogenetics and immunoinformatics by managing the extreme diversity and complexity of the antigen receptors of the adaptive immune response, the immunoglobulins (IG) or antibodies and the T cell receptors (TR) [1]. IMGT® is at the origin of immunoinformatics, a science at the interface between immunogenetics and bioinformatics. IMGT is based on the concepts of IMGT-ONTOLOGY[2]. These concepts are used for expert annotation and standardized knowledge in IMGT/LIGM-DB, the IMGT database of IG and TR nucleotide sequences from human and other vertebrate species and in IMGT/GENE-DB, the IMGT gene and allele database. The IMGT/LIGM-DB biocuration pipeline[3] of IG and TR sequences includes IMGT/StatAssembly for quality evaluation of publicly available assemblies as well as IMGT/LIGMotif, for the analysis of large genomic DNA sequences. Analysis results are checked for consistency, both manually and by using IMGT internal tools. The annotated sequences are integrated in IMGT/LIGM-DB and include the seven ontology axioms: sequence IDENTIFICATION (IMGT keywords) and OBTENTION, the gene and allele CLASSIFICATION (IMGT nomenclature), the constitutive and specific motif DESCRIPTION (IMGT description), the localization and position of the locus (IMGT ORIENTATION and LOCALIZATION), the translation of the coding regions (IMGT NUMEROTATION). In parallel, IMGT Repertoire is updated (Locus representations, Gene tables...), Protein displays (for new genes and alleles), Alignments of alleles (for new and/or confirmed alleles), Multiple Genome Viewer for assembly comparison and the IMGT reference directory.

IMGT IG and TR biocuration pipeline

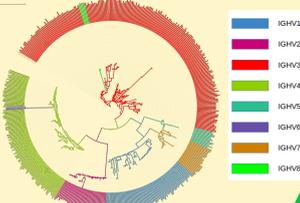

IMGT Nomenclature

1 IMGT genes and alleles

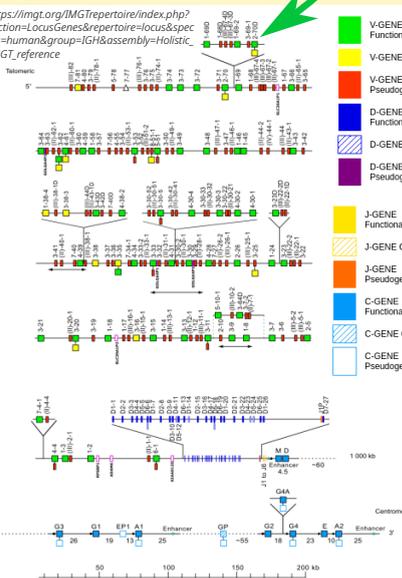

2 IMGT subgroups

V-REGION share at least 75% identity within the same subgroup

3 IMGT gene order

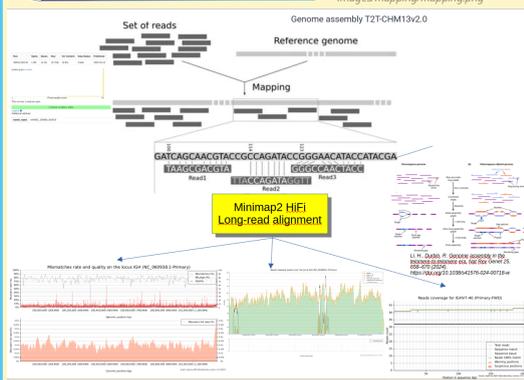

Human (*Homo sapiens*) IGH locus on chromosome 14 (14q32.33) Holistic IMGT reference map

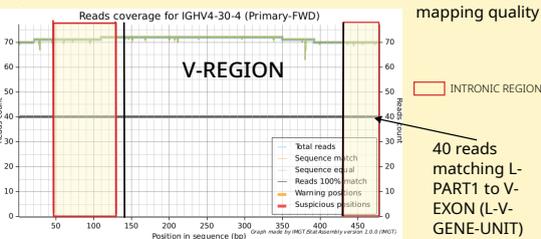

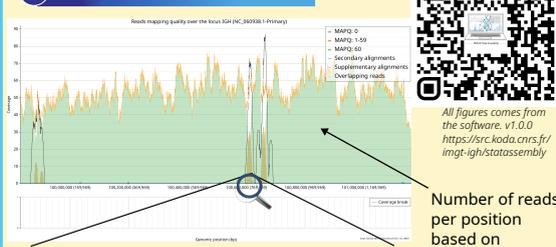

IMGT/StatAssembly

Assessing assemblies quality of IG/TR loci

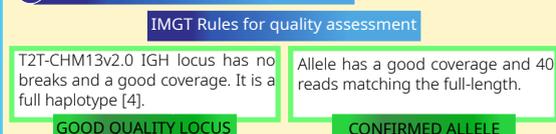

1 Pipeline of analysis

2 Results file

3 Confirmation of locus and alleles

<https://www.igmt.org/IMGTScientificChart/Assemblies/IMGTAssemblyquality.php>

IMGT webpages and tools

IMGT repertoire, IMGT reference directory, IMGT/GENE-DB, Locus representations, Gene tables, Protein display, Alignments of alleles, IG & TR genomic reference sequences, IG & TR genes and alleles database, IMGT tools and databases using IMGT reference directory, IMGT/V-QUEST & IMGT/HighV-QUEST, IMGT/DomainGapAlign, Collier-de-Perles, IMGT/2Dstructure-DB, IMGT webpages and tools from nucleotides to proteins

1 Dynamic gene table

IMGT allele name	Score for IMGT allele confirmation	FC	Chromosomal location	R T P	Gene names	Accession numbers	Positions in the reference (NC_007038.1)
